

Dunbar Eye Associates recommends **Optomap retinal imaging** to all our patients. It is the doctors' preferred method of retinal health screening.

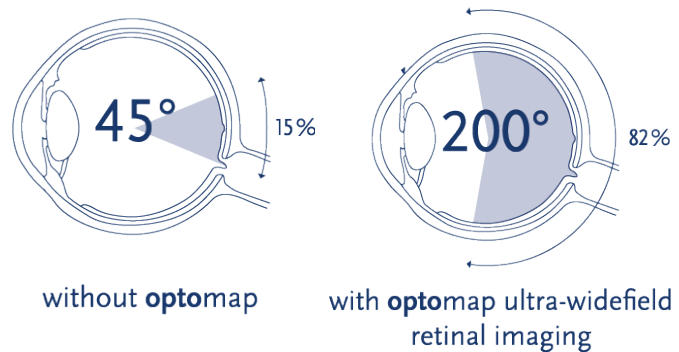

Screening tool for:

- ✓ Diabetic retinopathy
- ✓ Macular degeneration
- ✓ Glaucoma
- ✓ High blood pressure

Immediate imaging results during your exam. Provides a record baseline for future annual exams.

The test is a non-invasive procedure that provides a broader and more detailed view of the back of your eye (retina) than is possible with conventional methods.

This test may alleviate the need for pupil dilation with drops.

\$45 retinal imaging fee applies

- Not covered by insurance as a screening image
- May be billable to medical insurance if pathology is present

Please indicate:

I **elect** to have Optomap retinal screening today. I understand my eyes may still be dilated today if I have certain medical conditions.

I **decline** to have Optomap retinal screening today. I understand my eyes will be dilated today to assess my retinal health.
